

AY 2025-26

Lab of Web Technologies

Project preparation guide

May 22, 2026

This document summarizes the guidelines for preparation and submission of the project, explains about grading and answers some possible questions.

1 Required steps and important dates

As the exam schedule clarifies during the academic year, the dates XX below will be filled in and past deadlines will be crossed-out.

1. Send me an email with group members' names at zeynep.yucel@unive.it (even if you work as a single-person group).

Deadline(s):

Nov 28 Fri, 23:55 (Exam Jan 16 Fri, 2026)
Jan 06 Tue, 23:55 (Exam Feb 03 Tue, 2026)
May 06, 23:55 (Exam Jun 03 Wed 2026)
Sep XX, 23:55 (Exam Sep 2026)

2. Make sure your group has submitted a 1-page proposal (initial draft) for the group work.

Deadline(s):

Dec 05 Fri, 23:55 (Exam Jan 16 Fri, 2026)
Jan 13 Tue, 23:55 (Exam Feb 03 Tue, 2026)
May 13, 23:55 (Exam Jun 03 Wed 2026)
Sep XX, 23:55 (Exam Sep 2026)

3. The professor provides feedback on the proposals.

Deadline(s):

Dec 12 Fri, 23:55 (Exam Jan 16 Fri, 2026)
Jan 20 Tue, 23:55 (Exam Feb 03 Tue, 2026)
May 20, 23:55 (Exam Jun 03 Wed 2026)
Sep XX, 23:55 (Exam Sep 2026)

4. Submit the project on Moodle. Only one project submission per group is sufficient. Avoid submission after the deadline, as it will not be considered.

Deadline(s):

Jan 09 Fri, 23:55 (Exam Jan 16 Fri, 2026)
Jan 27 Tue, 23:59 (Exam Feb 03 Tue, 2026)
May 27, 23:55 (Exam Jun 03 Wed 2026)
Sep XX, 23:55 (Exam Sep 2026)

5. The professor will download the project before the exam and review the code.

2 Project Development

The project consists of a web application developed by, preferably, a group of 2 or 3 students.

If you cannot find a partner, you may also work alone.

The topic of the project proposal can be chosen freely. Please pick a theme that is captivating and enjoyable for you. But remember that it must be agreed with the professor.

The project needs to implement the notions of the course in compliance with the proposal. Ideally, the project will contain several web pages (static and dynamic), adequately presented, and managed by a web server able to handle different kinds of HTTP requests.

The languages and frameworks recommended for the creation of this project are those covered in class:

- HTML, for the structure and content of web pages
- CSS, for the presentation of the web pages
- JavaScript, for managing the dynamic behavior of web pages
- Python and Flask framework, for managing the web server

3 Project Submission

The submission is on Moodle. It is required to upload an archive (.zip, .tar.gz, etc), which contains the project and a document with the following information:

- The description and goals of the project.
- The instructions for running the web application.
- A clear description of the contributions and role of each member of the group.

Please test the project before submission. You may also ask your friends to try it. Make sure that the instructions work correctly and that the archive is not corrupt or damaged.

4 Project evaluation

The project can earn up to 30+1 points. The grade is broken down into the following areas, each ranging from 0 to 2-6 with a possible bonus point per area, with a maximum possible overall of 31.

- **Code quality (6 points):**

Make sure that the code is properly formatted, thoroughly commented, comprehensively documented, rigorously tested, and secure.

The professor will test the project and also assess it for its consistency with the original proposal.

- **Innovation and creativity (2 points):**

Originality of the project idea and creative problem-solving approaches will be assessed.

- **User experience and interface design (2 points):** Usability, accessibility, aesthetic design, overall user interface quality, responsiveness, and intuitiveness will be assessed.

- **Deployment and maintenance (2 points):** Consider how easily the project can be maintained in the future. Documentation regarding setup will be evaluated. Potential future enhancements can be discussed in the oral exam.

- **Collaboration and group structure (6 points):**

If you work as a group, your project should demonstrate an effective collaboration among group members, highlighting the sharing of knowledge and a clearly defined division of roles and responsibilities within the team.

This will be assessed through a review of the submitted document and by asking questions during the oral exam.

- **Project presentation (6 points):**

Prior to the exam, the professor will review the work, while the students will deliver a brief presentation during the exam itself.

It is recommended that the students focus on discussing the web application, emphasizing its purpose and features, strengths, and any potential limitations.

- **Knowledge of the course contents (6 points):**

The project should effectively incorporate the concepts covered in the course, aligning closely with the proposal. This will be evaluated through a review of the code in the submitted web application and by posing questions during the exam.

5 Some FAQ and answers

1. **Can I take the written or oral exam without passing the prerequisites?**

No. You cannot take the written exam or the oral exam of this course, if you still have not passed its prerequisites.

2. **Can I take the written exam and the oral exam in different exam sessions?**

Yes, you can. But remember that you can keep the grade of your first exam until the end of academic year. You need to pass the second exam within the same academic year. Please note that the exam in September session is the last of the academic year. Therefore, it is important to be aware that after this exam session, you will be required to redo both the written exam and the project (oral exam).

3. **I decided to take the written exam and the oral exam in different exam sessions. Do I need to register for an exam in both sessions?**

Yes. If you are taking at least one of written or oral exam, you will need to register.

4. **I forgot to register for the exam until the end of registration deadline. Can you register me?**

No. If you missed the registration deadline, you can consider taking the exam in a future exam session or consult with the student office.

5. **Can I work alone?**

Yes. I recommend you work in a 2- or 3- people group. But if you cannot find a partner or prefer to work alone, it is also ok.

6. **Can we split the project into multiple files?**

Yes. Actually it is recommended to split it into multiple files. Just do not split the project into too many files.

7. **Can we use third-party libraries (Bootstrap, jQuery, ...)?**

Yes, they can be used to improve the project and speed up its implementation. However, you are expected to understand the logic behind their function.

If you choose to use such tools, you may implement a part of the web pages even without library components or customize some of those for demonstrating that you have mastered the technologies behind the library.

8. **Can we use languages, frameworks, instructions, components, other than those recommended?**

Yes. Actually, you are encouraged to explore. But keep in mind that the reasons for that development choice will be investigated in the exam. Furthermore, you will have to demonstrate that you can do the same things with the recommended language/framework.

9. **Will I only be evaluated on the part of the project to which I contributed?**

No. One of the objectives of the project is to assess the transfer of knowledge, task division, and integration, since these elements are essential components of typical scenarios faced by digital managers.
